Hi Liz,

I plan on using special account money for this SOW. I'll check with Lourdes regarding spending authority.

Thanks,

Sam, please let us know:

- o what is the critical-ness of the time frame?
- o what is the estimated amount?
- o what vehicle do you intent to use?
- o does this support a target?
- o why can't special account funds be used?

Hi Steve,

I asked Andrew to give me a laundry list of items so that I can develop a SOW. I'm wondering if there is funding left for this FY. I will do an estimate for this SOW. It will also include a Workplan (SAP/QAPP/HSP). I will keep you in the loop.

Thanks,

Sam Garcia

Hi Sam,

As requested, I have put together a list of items that we would request a contractor to complete. If you have any questions or concerns, please don't hesitate to contact me.

Quarterly potentiometric maps should be created based on historical data to determine groundwater flow direction, and seasonal variations to groundwater flow.
The validity of Platte River surface water sampling locations N43 and N46 should be assessed using current and historical groundwater potentiometric maps.
Monitoring wells MW-1 through MW-6 should be properly developed.
Monitoring wells MW-1 through MW-6 should be gauged for separate phase product, and sampled for VOCs, SVOCs, and metals for four consecutive quarters.
New quarterly potentiometric maps, and plume maps (if applicable), should be generated using data from the groundwater sampling.
Concentrations of metals, VOCs and SVOCs in soil collected during the RI should be compared to values presented in the Regional Screening Level (RSL) Soil to Groundwater Supporting Table
(http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/Generic_Tables/pdf/soil2gw_sl_table_run_JUN2011.pdf)

I think this matches our data requests to CCoD. If VOCs or SVOCs (or NAPLs) are detected at concentrations above MCLs or RSLs then additional work tasks would likely be needed.

Thank you!

Andrew
